Probe the binarity of low-mass stars

Submitted by dwalker on Mon, 2014-07-14 09:31

In March 2014, SAM was used to probe the binarity of low-mass stars paired to nearby solar-type dwarfs. One 0.2 arcsec binary was discovered. The paper is accepted by the *Astronomical Journal*. Its preprint is available at ArXiv: [1407.6045](http://arxiv.org/abs/1407.6045) [1]
