

SMARTS 1.5m Mirror Reflectivity Nov. 2009

* Apr 2009. Mirrors were washed. Reflectivity wasn't plot due to measurement error.

Mirrors have been washed every three months as scheduled. Reflectivity has been improved increasing by about ~3%. Even though best Reflectivity reached is ~87% on Primary Mirror and ~85% Secondary Mirror. Besides Reflectivity, cosmetic on both Mirrors doesn't look good, you can see many old "scratches" and marks.
